An office system iTON is designed to create good working environment.

The collection is featured by functionality and usability. An ergonomic, comfortable working environment meeting individual needs is created by combining different segments into the modules. The system can have different color tones.

The main focus of high quality **office furniture system iTON** – "pure" design forms, minimalism and highest possible functionality. Comfortable working places can be created by combining the collection in different ways. Different color tones can be applied to the product. The concept of the office furniture system is focused to usability.

Designer **Vytautas Puzeras**

The system iTON is a functional, practical,
and comfortable office system for individual work.

The extended tabletop ensures space to the visitor.

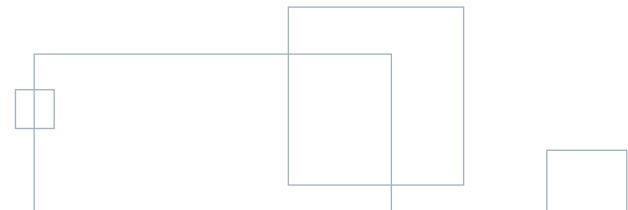

The suspended drawer container creates esthetic and light impression.

The corner working place with tapestry partition creates privacy impression to the working place.

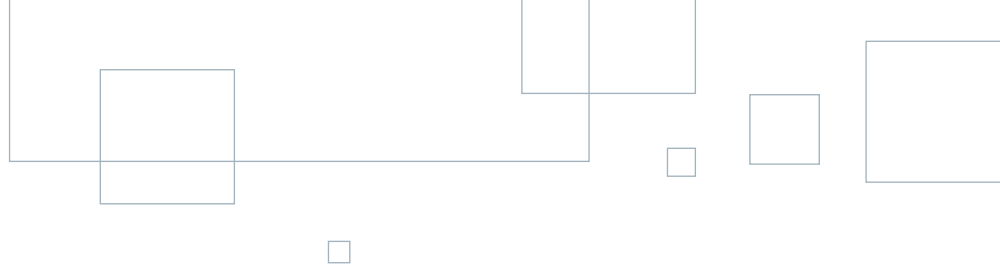

The system iTON is a beautiful solution for team work.

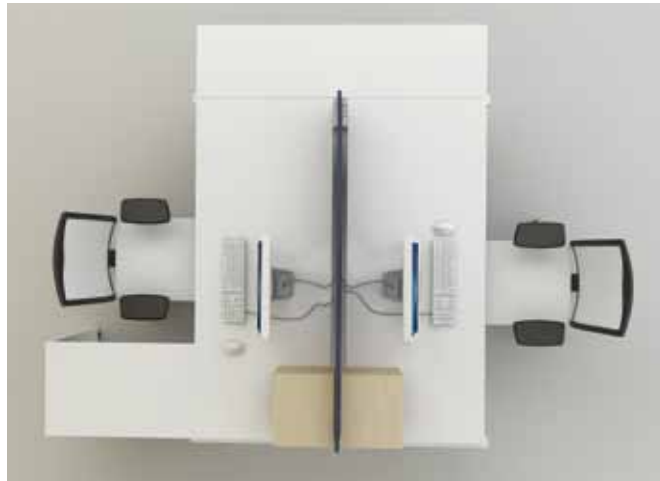

The furniture can be functionally installed in different spaces by combining separate segments into the modules.

Convenient working space both to the employee and visitor is created by use of additional elements.

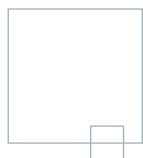

This collection can be easily combined into the modules, modified, or formed. Ample creative freedom permits to combine the same details, par-

titions, table cabinets, feet protection covers, and drawer containers into different generality.

Warm, natural colors, glass, tinted facades of the cupboards will bring in reliability, comfort, lightness, and exclusiveness to your office.

The furniture iTON is made following the up-to-date world tendencies, is featured by simple and elegant forms. Ergonomically compatible elements

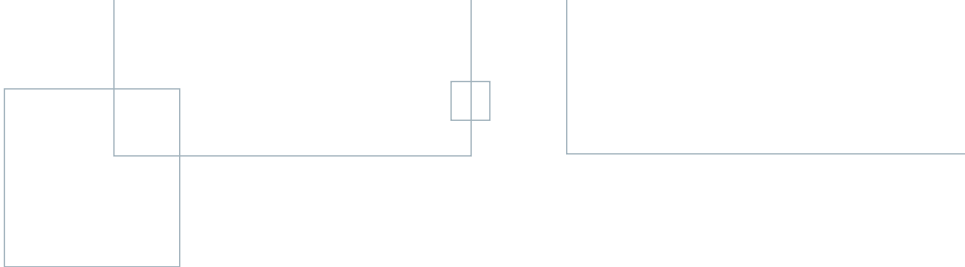

such as wood, glass, and aluminum are repeated accurately and clearly in the collection.

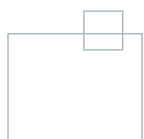

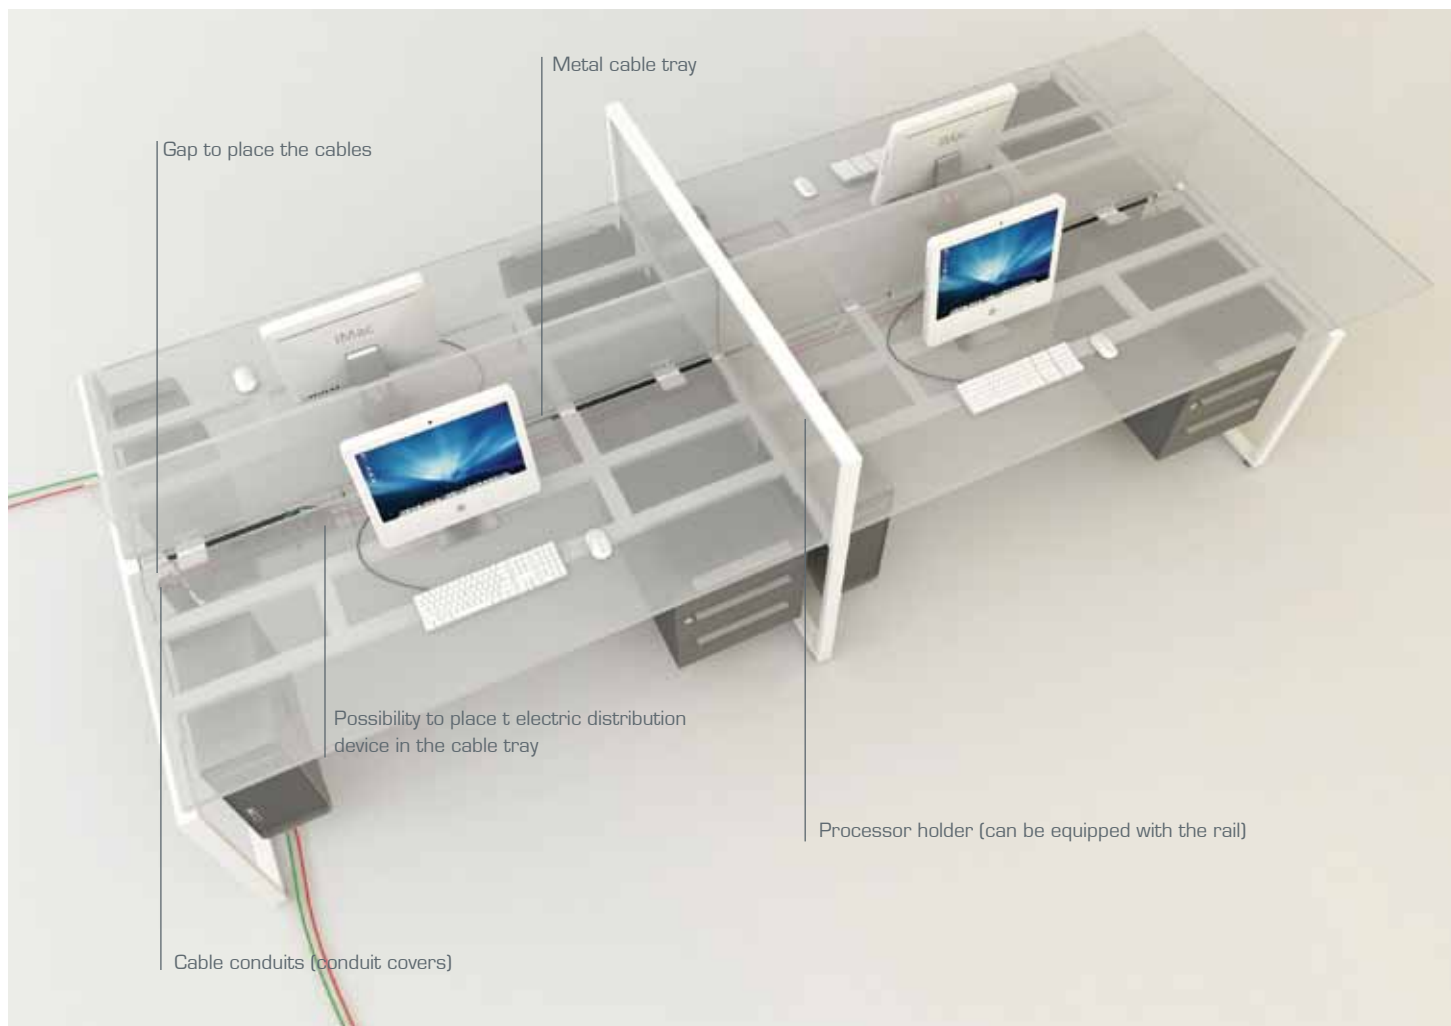

The office furniture iTON are easily adapted for each working place, including the conference rooms.

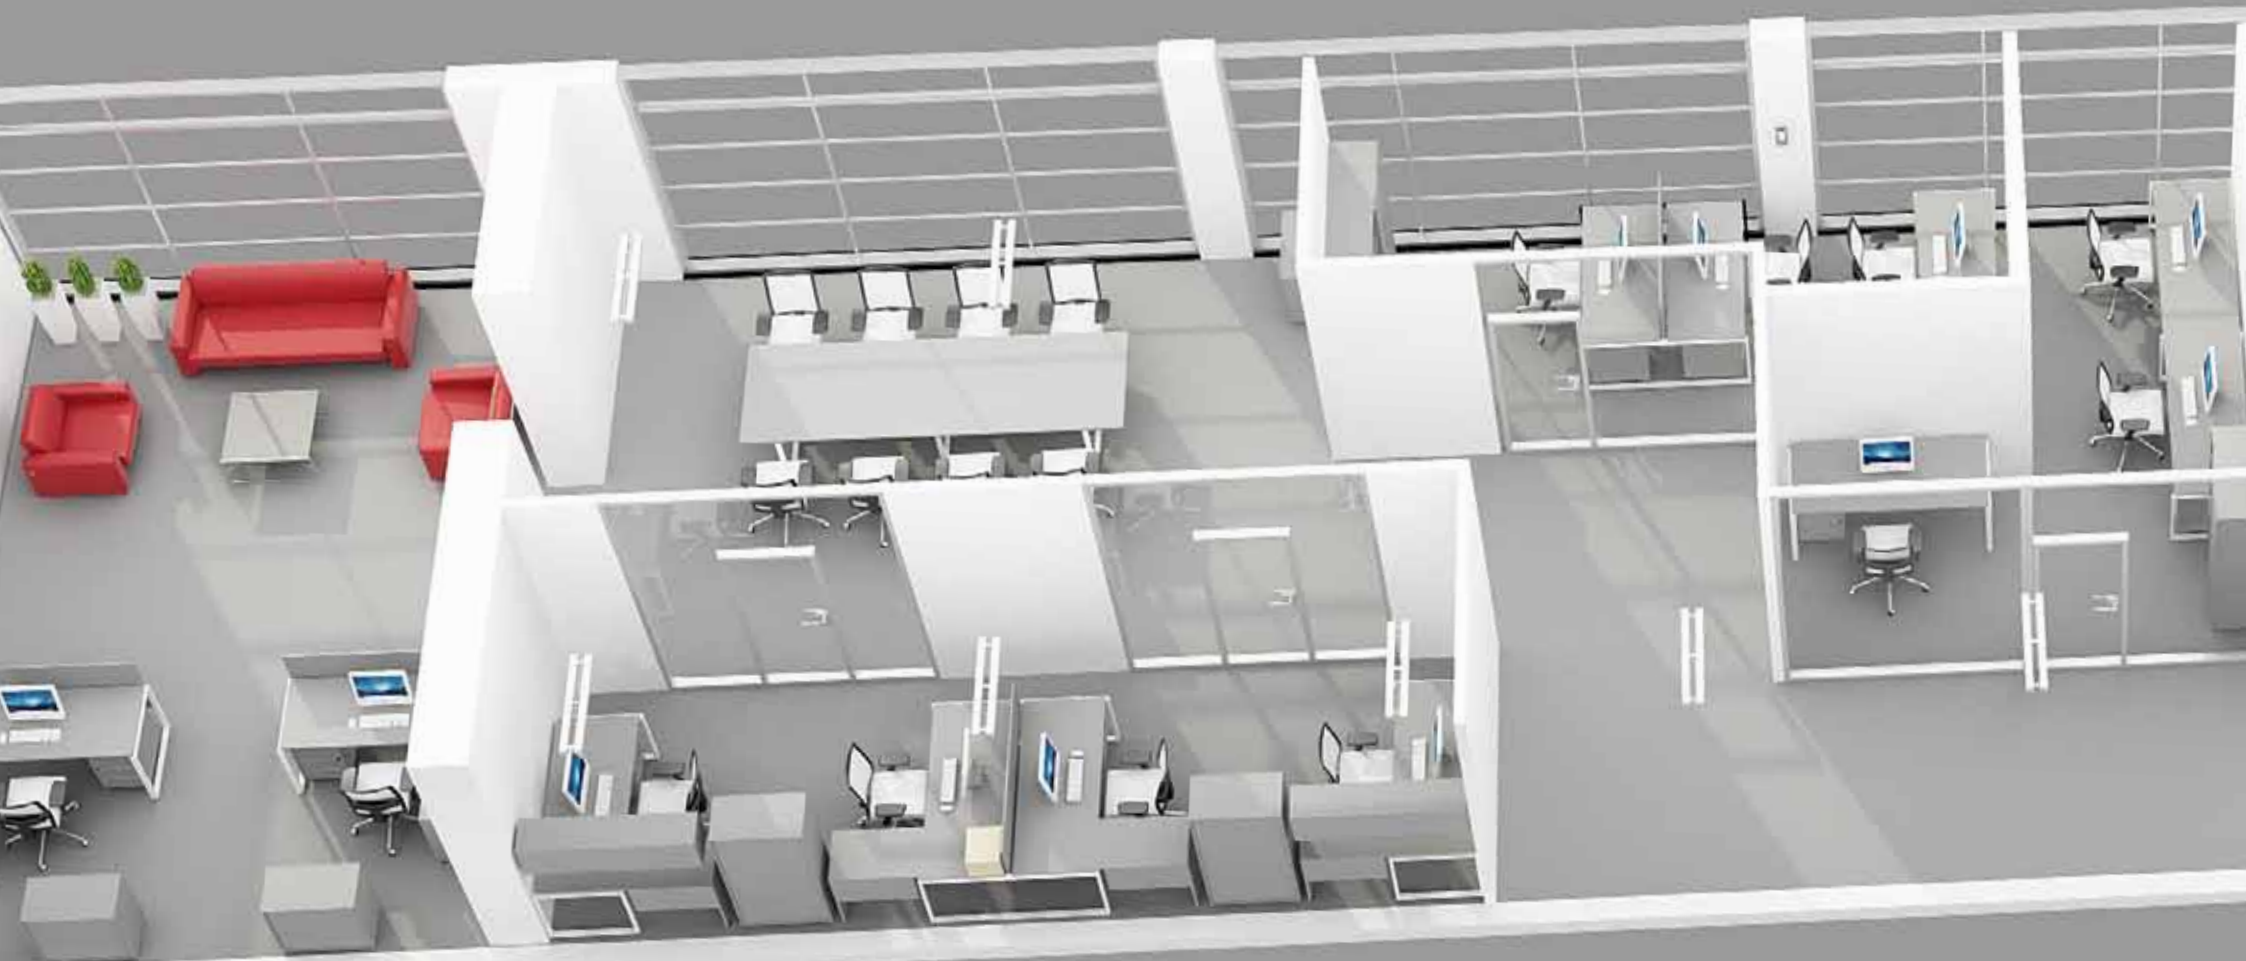

Stability of the working place is ensured by metal table structures. All suspended components are fastened within metal parts. Electric installation solutions are an integral part of the modern working place. Electric installation system mounted in the working place ensures safe and convenient routing of the cables from the computer to the communication point.
